JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

**XII. Two newly discover'd Arteries in Women,
going to the Ovaria. By Mr Ranby, Sur-
geon to his Majesty's Household, F. R. S.**

S Ometime ago I presented the *Royal Society* with a Description of two * Arteries, which arising from the *Aorta*, and sending Branches to the *Glandula Renalis*, then descend to the *Testicles*. And I have since found the same Arteries in Women, descending in the same common *Capsula* with the *Spermatick* Artery and Vein, to the *Ovaria*. These Arteries very probably are what the late Excellent Anatomist, *Valsalva*, took for excretory Ducts of the *Glandulæ Renales*, the Disposition and Progress of these being very much alike to what has been ascrib'd to those supposed Ducts.

* v. *Phil. Trans.* N^o. 387.
